response to other organism
response to biotic stimulus
defense response
immune response
response to other organism
biological process involved in interspecies interaction between organisms
defense response to bacterium
defense response to symbiont
immune system process
defense response to virus
regulation of defense response
regulation of response to biotic stimulus
positive regulation of defense response
regulation of immune response
negative regulation of viral genome replication
negative regulation of viral process
regulation of response to external stimulus
regulation of innate immune response
response to virus
positive regulation of immune system process
regulation of immune system process
response to stimulus
regulation of viral process
activation of immune response
response to cytokine
regulation of viral life cycle
positive regulation of innate immune response
response to bacterium
positive regulation of response to biotic stimulus
immune response−regulating signaling pathway
regulation of viral genome replication
adaptive immune response
defense response to bacterium
innate immune response−activating signaling pathway
regulation of cytokine production
regulation of response to stress
cytokine production
cellular response to cytokine stimulus
antigen processing and presentation of peptide antigen
cytoplasmic pattern recognition receptor signaling pathway
antigen processing and presentation
inflammatory response
adaptive immune response
positive regulation of cytokine production
type I interferon production
regulation of interferon production
response to interferon−beta
antigen processing and presentation of exogenous antigen
viral process
negative regulation of response to cytokine stimulus
adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfam
response to chemical
defense response to bacterium
positive regulation of type I interferon production
response to type II interferon
cytokine−mediated signaling pathway
catabolic process
viral genome replication
viral life cycle
leukocyte mediated immunity
response to type I interferon
antigen processing and presentation of peptide antigen via MHC class I
tumor necrosis factor−mediated signaling pathway
cellular response to type I interferon
regulation of immune effector process
cellular response to tumor necrosis factor
regulation of I−kappaB kinase−NF−kappaB signal transduction
antigen processing and presentation of exogenous peptide antigen
type I interferon−mediated signaling pathway
regulation of cytokine production
positive regulation of leukocyte mediated immunity
cell activation involved in immune response
leukocyte mediated immunity
antigen processing and presentation of endogenous antigen
response to molecule of bacterial origin
leukocyte activation
positive regulation of immune effector process
positive regulation of response to stimulus
antigen processing and presentation of endogenous peptide antigen via MHC class I
interferon−mediated signaling pathway
antigen processing and presentation of endogenous peptide antigen
cellular response to stimulus
positive regulation of interferon−beta production
cell activation
programmed cell death
response to lipopolysaccharide
interferon−beta production
regulation of interferon−beta production
